

## FACT SHEET

Hoofbosch Investment Fund

ISIN: NL0006327413

### Investment Objective

Investment Fund Hoofbosch seeks long term capital appreciation at an acceptable risk. The fund strives for an average return of a minimum of 7% a year on the long term (10 to 15 years), after deducting all costs. The fact that the fund has a long investment horizon, a so called “buy and hold strategy”, leads to a long term return with reduced transaction costs.

### Strategy

The investment policy is based on a study of macro-economical trends and a detailed analysis of individual businesses. The fund focuses on the very long term. The result is a selection of stocks and obligations characterized by their high returns, good perspectives, healthy financial position, low risk and a high profile dividend and profit record in the long run. Only a limited number of companies and governments worldwide meet this last condition. This selection is the core of the fund’s investments. Accordingly, stocks will be invested by the fund manager in 15 to 20 solid companies. Moreover, a limited percentage of “specials” (maximum of 30% after appreciation) such as small caps, turn-arounds, and merger candidates plus gold (max. 10%), may have a modest position in the portfolio.

### Structure of the fund
